[Upgrade](#)

Build a simple web application (local only) that can:

Sign up a user

Log in a user

Display a protected dashboard page accessible only after login

This exercise is designed to evaluate:

How you prompt and utilize AI tools (Bolt.new)

How you structure your codebase

Your understanding of authentication and security principles

## Requirements

### 1. Authentication

Implement a basic signup and login flow.

Dashboard access should be restricted to logged-in users only.

### 2. MongoDB

Use MongoDB Atlas for data storage.

Create a database with a user's collection (and more if needed).

Each user record should include:

name

email

password (encrypted)

Ask anything
